

Shell as a Service Version 1 by ARPHost

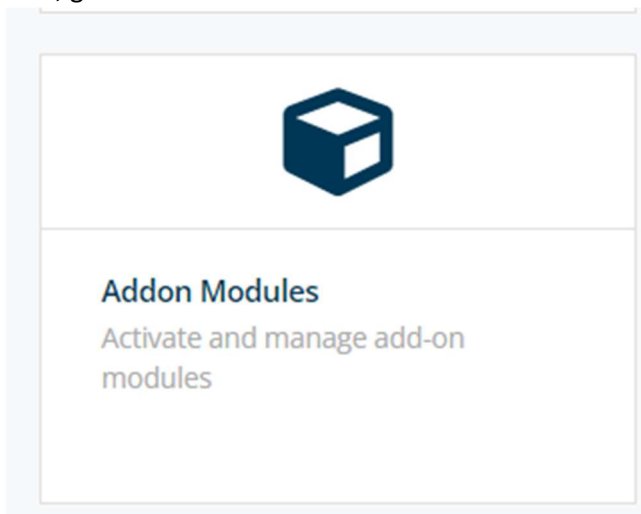

1. Extract shellaservice-1.0.zip to shellaservice.
2. Upload shellaservice to your addons folder under modules in your whmcs directory.

3. Login to WHMCS and go to System Settings

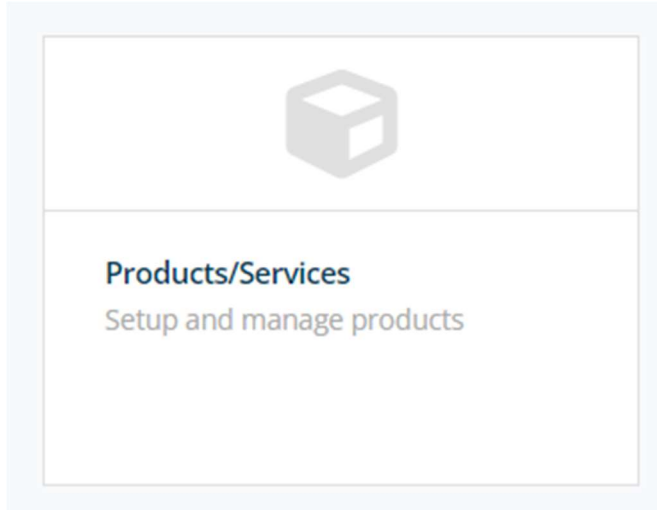

4. Next, go to Add-on Modules.

5. Next Activate Shell as a Service, Set Access controls, enter your license, and save changes.

» Shellaservice		1.1	ARPhost	Activate	Deactivate	Configure
API Key	arphost- Enter your API key here					
Access Control	Choose the admin role groups to permit access to this module: <input checked="" type="checkbox"/> Full Administrator <input type="checkbox"/> Sales Operator <input type="checkbox"/> Support Operator					

6. Now you can setup a product or product add-on with a shell script. Go to Product/Services.

7. Add a new Product Group or use an existing.
8. Create a new product.
9. Go to the Modules settings tab of the product.
10. Select Shellaservice from the Module Name dropdown.
11. In createbash put the path to your shell script including the script that you want to run on order.
12. In suspendbash put the path to your shell script including the script that you want to run on suspension.
13. In unsuspendbash put the path to your shell script including the script that you want to run on unsuspension.
14. In terminatebash put the path to your shell script including the script that you want to run on termination.

You are now ready to run just about any shell script you want to from your whmcs server when an order is completed. All you have to do is select one of the following options. You can always accept order manually as well.

<input type="radio"/>	Automatically setup the product as soon as an order is placed
<input checked="" type="radio"/>	Automatically setup the product as soon as the first payment is received
<input type="radio"/>	Automatically setup the product when you manually accept a pending order
<input type="radio"/>	Do not automatically setup this product

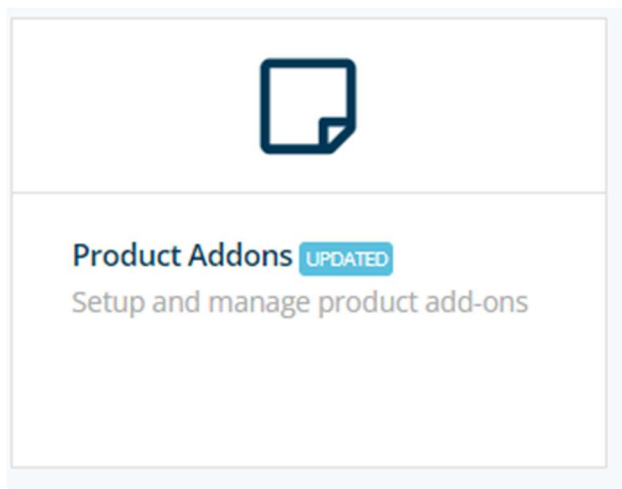

You can also do the same thing from a Product add-on. You could use one module to deploy a VM then you could run an Ansible playbook after using our module if you wanted.

Here is how you add a Product Add-on.

1. Go to System Settings

2. Go to Product Addons

3. Add New Add-on

4. Select Shellaservice as the module.

Create New Addon

Addon Type
Defines how WHMCS manages the item

☒ Independent Product

☐ Add-On Feature

Name
The default display name for your new addon

Module
Choose a module for automation

Shellaservice ⓘ

Create as Hidden
A hidden product is not visible to end users

☒ ON

Auto Assign to Products
Automatically assign to all applicable products

☐ OFF

[Continue »](#)

5. Give it a name select Independent Product then click Continue
 6. Once created you have the same options as a Product/Service
- You can apply the add-on to a Product
